

## Nord-Lock Washer Original SP Type - Imperial Sizes

Nord-Lock washers, also known as wedge-locking washers, secure bolts with tension instead of friction. Working as a pair, these washers create a wedge-effect underneath the bolt head or nut so that the joint is prevented from loosening unintentionally. Nord-Lock washers are quick and easy to install and remove, and they are reusable. Supplied as a glued pair, they are appropriate for use in vehicles, for DIY and for watersport equipment. Most sizes are available in two external diameters: the smaller standard type, and the larger SP type listed here. Here you will find the specific imperial sizes; please refer to the data sheet and the metric section for other appropriate sizes.

Part No.	d1(mm)	d2(mm)	t (ZnFlk)	t (A4)	Bolt Size Metric	Bolt Size UNC
