

Pozidrive Countersunk Chipboard Screws

General purpose wood screws with a pozidriv countersunk head. The countersunk head is typically used in conjunction with a countersunk hole providing a flush, snag free fit. Standard A2 stainless steel and the marine grade A4 stainless steel are particularly good where the screw heads are visible in outdoor or in humid/wet environments, such as bathrooms and kitchens. Where we have part thread versions, we have listed them separately below. We also stock the stainless steel torx drive version of these wood screws. Please note that the head shape can vary between a countersunk, double countersunk, and bugle shape.
